

# EMPOWERING WATER WARRIORS

with WaterApp

## Warehouse for an Online Grocery Store in Pune

### WATER CONFIGURATION

OVERHEAD - 2

- RO Inlet
- RO Outlet

BORE WELL - 1

### ISSUES FACED

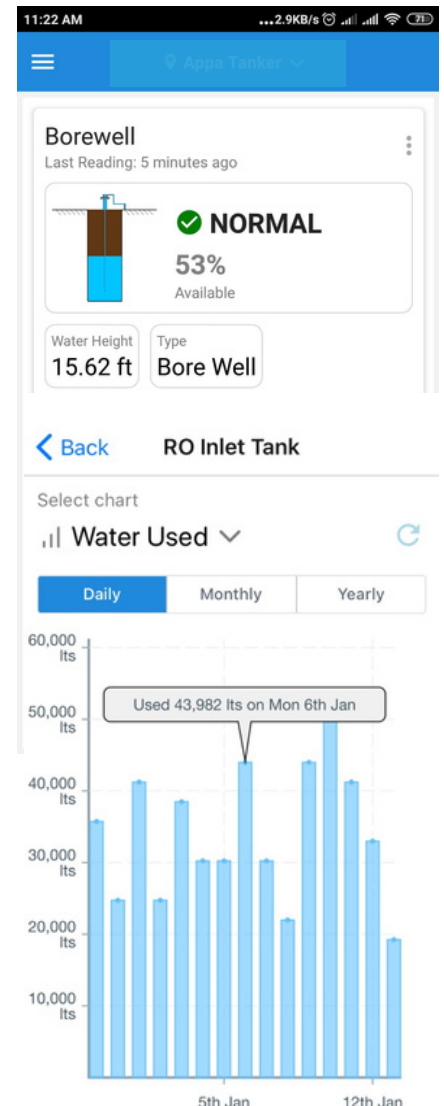

- RO operation is critical, water is used in the butchery & veggies. If RO usage is not planned properly, **production suffers**.
- Staff takes physical rounds to ensure availability.
- Frequent **overflows** spoil produce. Cleaning wastes manpower.
- **Excessive monthly water bill**. Cannot monitor RO backwash.
- There is **no predictability for the borewell** hence tanker ordering is inefficient.

### HOW DID WATERAPP HELP?

- **Cost Saved**; no production delays and overflows.
- **Increased productivity**- no more manual tank monitoring.
- **Production planning**- better scheduling for butchery, veggie ops.
- A way to track RO backwash for efficient functioning.
- **Borewell visibility** takes guesswork out of tanker ordering.
- Management gets a **water centric view of operations** per site.
- Can **project water costs** and standardize water usage/ operation.

### NEXT STEPS

- Water quality monitoring.
- Central dashboard for management.
